### **Evolution Lab Biology In Motion**

A humorous but powerful tool for simulating evolution. Watch a trait evolve and experiment with the effects of mutation rate and the strength of selection. This activity shows all the steps of natural selection in entertaining style, but generates real simulation data that can be exported or printed.

Evolutionary thought, the conception that species change over time, has roots in antiquity – in the ideas of the ancient Greeks, Romans, and Chinese as well as in medieval Islamic science. With the beginnings of modern biological taxonomy in the late 17th century, two opposed ideas influenced Western biological thinking: essentialism, the belief that every species has essential ...

Darwinism is a theory of biological evolution developed by the English naturalist Charles Darwin (1809-1882) and others, stating that all species of organisms arise and develop through the natural selection of small, inherited variations that increase the individual's ability to compete, survive, and reproduce. Also called Darwinian theory, it originally included the broad concepts of ...
